STARSYS™ SYSTEM
SECURE IV CART

The Starsys Secure IV Cart is a system of polymer components that offers security in a flexible storage solution.

Comprehensive System: Two different sized carts are constructed from a combination of polymer components.

Increases Productivity: Removable totes allow for the creation of an inventory replacement system with prestocked totes. Polymer construction prevents damage to products which results in additional work and cost.

Easily Accessible: Full extension shelves allow for solution bags to be stored standing up or laying down while providing complete access to all of the product.

JCAHO Compliant: The locking feature is in compliance with JCAHO's medication storage standards.

Visible Security: A locking clear door provides for visual inventory while contents are secure.

Enclosed Protection: Solid enclosure panels and a door protects contents from splashes or other potential contamination.

Corrosion Resistant: Constructed of durable corrosion-proof polymer panels that are easy to clean won't chip, rust, or dent.

Easily Maneuverable: The 58" height lighter polymer design and 5" (127mm) casters, allow for easier, safer transport.
