STARSYS PASSIVE LOCK SECURITY SYSTEM

Designed for environments where aesthetics are important and cleanliness is essential, Starsys is a modular storage system that meets the demands for storage, transport and productivity centers. Its polymer design won't rust, dent, chip or flake, unlike other products constructed of metal or particleboard. Its modular design allows it to be configured for a specific need and then be reconfigured to meet the rapid and constant change in today's health care and laboratory environments. The Starsys Passive Lock provides the added feature of visual security. You can be confident that your supplies are untouched, with a quick look at the security seal.

- **Systems Oriented** - Provides security feature typically available only on carts. Available on Starsys carts or Starsys WorkCenters.
- **Saves Time** - Provides instant inventory check. Secures each drawer individually. Inventory only those drawers that have a broken seal.
- **Increases Productivity** - Removable totes reduce down time by allowing instant replenishment with pre-stocked totes.
- **Improves Ergonomics** - Drawers are easily reconfigured without tools allowing the most frequently used drawers to be relocated to the top of the cart.
